

Sensitivity analysis of the scale-aware boundary framework

24 parameter combinations evaluated on synthetic recovery and real-data segmentation

(a) Synthetic mean F1

(b) Mean real-data boundaries per CPT

Best locked setting: MIN_SEP_M = 0.8, PEAK_PROM_QUANTILE = 0.95, MIN_SCALE_SUPPORT = 4, tau = 0.35

Cell values are read directly from sensitivity_results.csv; ★ marks the selected best setting.
